Product Code: P396

SD CARD ADAPTOR

- The Micro SD Card solution for MC206X and MC224.
- New software functions for SD cards.
- Similar cost to NextFlash memory stick.
- Up to 2G byte capacity.

Trio introduces an industry first – Standard SD Memory Card support in a Motion Coordinator!

Trio introduces the ability to use industry standard Micro SD memory cards to store controller program and data files. You can add up to 2Gb of additional Flash storage capability on a Trio controller with the SD card. When plugged into the MC206X or MC224 Motion Coordinators the SD card allows the controller to read and write files as a Flash drive using the FAT32 file system. Files are added to the SD card in typical drag and drop fashion on the PC, and then the Micro SD card is plugged into the Motion Coordinator using a simple adaptor.

The Micro SD Card fits compatible Motion Coordinators by using the P356 Trio SD card Adaptor and can hold up to 2Gb of data. This popular format also fits mobile phones and cameras and easily connects to a PC.

"Having such capability in a motion controller opens countless possibilities for mass data collection and recipe management storage" says Ed Novak, Trio USA Sales Manager.

Controller has FAT file system built in
DOS like commands are available:

DIR D
FILE DIR
FILE CD <directoryname>
FILE TYPE <filename>
FILE DEL <filename>
FILE LOAD_PROGRAM <program name>
FILE LOAD_PROJECT <project name>
FILE MD
FILE SAVE_PROGRAM
FILE SAVE_PROJECT
